

Android task

Implement a screen showing a list of posts, where each item displays post title and body. Posts should be cached locally with cache validity time of 5 minutes. Also there should be an option to refresh the list manually.

For fetching posts use this api: <https://jsonplaceholder.typicode.com/posts>.

Click on a post should show a popup with details (name and email) of the owner (fetched from api: <https://jsonplaceholder.typicode.com/users/{userId}>) and an option to delete the post locally.
